

**Fred
Watson**

Deaf employee

SCENARIO 1: OPENING A DOOR

MEETING CALL

Fred is in his office, and he is really excited to be working for such an advanced company. Right now, he is working on a really important design, but he feels stuck. He has been staring at the same design for hours without being convinced of it. He decides he needs one of his colleagues' opinions.

What he loves about the company he is working for is their accessibility tools. He has a gyroscope in his right hand, and with that, he can easily call his colleague, Rebecca. Carefully, he moves his right hand and makes the sign to call her.

Rebecca is focused on her work when she feels a buzz in her left arm. She glances at it and sees her smartwatch with a notification of an upcoming meeting from his colleague and friend Fred. She presses one of the buttons, accepting the call. Her monitor displays the Sign Syncer translating site.

In another room, Fred, who, after requesting a meeting with Rebecca, kept working, feels a buzz from his own smartwatch. When he glances at it, he sees that Rebecca has accepted his call and that his desktop monitor is now on the Sign Syncer translating site.

STEPS

- Gyroscope on hand
- Watch module on arm
- Gyroscope triggers meeting, watch shows incoming meeting and can accept by a pressing motion.
- Watch vibrates as well

POTENTIAL PROBLEMS
